

Best in Breed Approach to Autonomous Coding

Aggregating Industry Best Technology using DeliverHealth Platform

With a nationwide shortage of qualified medical coders, healthcare organizations and ambulatory practices struggle to find the right people to fill their seats. A wise first step: Use advanced technology to code your accounts, such as autonomous coding.

95% accuracy delivered by autonomous coding

There are several well-known vendors in the industry that are having some real success with autonomous coding, leaving facilities working with multiple vendors. DeliverHealth is taking a best in breed approach and building an ecosystem or a “highway” to aggregate service areas using our platform. **Simplified flow!**

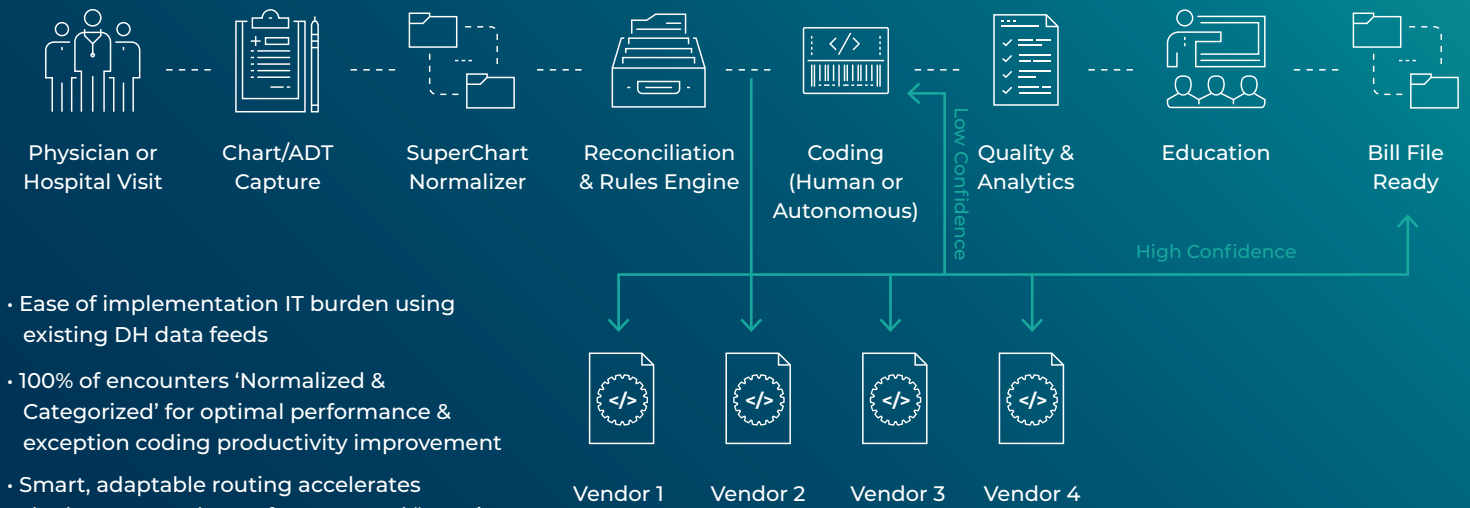

DeliverHealth has evaluated the top vendors’ autonomous coding engines - for all patient types. We are integrating these proven engines with our platform, which encompasses rules for intelligent routing of records, based on superior performance for each patient type. The codes are stored in our platform for data analytics and returned, via an interface, for direct billing within hours. We also provide humans for the exceptions. Our audit tool is invoked for all coding, whether automated or human-assisted.

DeliverHealth's Coding Solutions Workflow

- DH Platform integrates with multiple AI engines for optimal customer results vs. a single engine strategy
- Analytics and workflow to enable and compare multiple AI engines through a single platform
- Records are coded less than 2 hours
- Targeted AI applied at the diagnosis/procedure level vs enterprise solution applied for all chart types.
- AI partners focused on fully automated coding work vs enhancing coder production
- DH provide coders for exception coding.
- Proven ROI, especially for domestic coding.
- The engine can take on significant volume growth without causing backlogs.

DH Platform Automates Middle Revenue Cycle

Best in Breed Autonomous Approach - using single platform, optimizes autonomous application to reduce costs and improve speed to bill with proven reduction in denials.

- Ease of implementation IT burden using existing DH data feeds
- 100% of encounters 'Normalized & Categorized' for optimal performance & exception coding productivity improvement
- Smart, adaptable routing accelerates deployment and use of aggregated "Best in Breed" engines and application of customized rules
- Robust physician, coder, engine analytics - CDI, audit trails, feedback loop, reporting, dashboards
